PROFESSIONAL PROFILE

Systems Engineer and fullstack developer focused on product engineering. I connect interfaces, APIs, data, and infrastructure to take solutions from problem definition to deployment. Experience spans web development, system integrations, internal tools, and AI assistants — using React, Next.js, TypeScript, NestJS, FastAPI, and Supabase based on each project's needs. Comfortable owning the full cycle: design, implementation, quality, and deploy.

WORK EXPERIENCE

Fullstack Developer Sep 2025 – Present
Ministry of Mines and Energy Barranquilla, Colombia

Responsibilities: building and maintaining several institutional production tracks in parallel — service integrator / interoperability gateway, energy-surveillance platform (dosimetry), and stakeholder-mapping app — with focus on reliable APIs, data consistency, and usable frontends under institutional constraints.

- Grew the integrator's interoperability surface from **2 to 6** integration route/families on an HTTP gateway (APISIX + FastAPI + Vue).
- Unified dosimetry end-to-end (Node API, SQL Server, Angular) over test volumes on the order of ∼**629k** historical and ∼**61k** new records; repair CLI/scripts recovered and synced historical data into the unified layer.
- Accelerated delivery closure versus the prior pace reported by the area (work had been delayed under the previous developer), sustaining multiple stories in parallel with documented QA deploys.

Fullstack Developer Jun 2025 – Aug 2025
Guarapo Labs Barranquilla, Colombia

Supported international client delivery and a new product spanning frontend, backend, and AI. Built internal tools with Next.js and Supabase.

- After joining, we accelerated delivery and caught up to the schedule; on the visual/front track I kept UI tasks current.

Fullstack Developer · AI / automation Feb 2025 – May 2025
Clazz Dev Barranquilla, Colombia

Designed AI-driven automation and assistants with OpenAI, n8n, FastAPI, and Python — agents inside real sales/ops workflows, not only chat UIs.

- Sales-agent workflows that cut human operations from about **7 people to 2**, with the agent managing the sales cycle end to end.

Fullstack Developer Jun 2024 – Jan 2025
I-Cluster Barranquilla, Colombia

Developed software for a municipal emotional-health initiative (Tolú) with React and Express. Cross-functional delivery of features that supported wellbeing programs, with emphasis on reliability and maintainable shipping.

Fullstack Developer Apr 2022 – Jun 2024
Infinity Tech Consulting Barranquilla, Colombia

Built and maintained fullstack web applications with Next.js, Flask, and Prisma — frontend and backend — deployed on AWS and Vercel.

- **Commodo**: loyalty / points platform still in production; owned day-to-day front work across the client's **3 web platforms**.
- Built a POS from scratch in ≈**1 month**, integrating Commodo APIs, Siigo, and external lookup services (e.g. departments).

Support / Freelance (MIOBOX) Nov 2021 – Jan 2022; freelance ≈2 months in 2026
Sofin SAS Barranquilla, Colombia

Early chapter: electronic-invoicing support and ERP code testing. Freelance return: NestJS SOAP/REST bridge between ERP and plant operations (orders, consumption, delivery close).

- Cut the ERP update cycle from about **40 minutes to ∼2 minutes** via the integration bridge.

EDUCATION

Systems Engineer 2018 – 2022

Universidad del Norte Barranquilla, Colombia

Distinction: Outstanding Student.

SKILLS

Core: TypeScript, React, JavaScript, Java, Python, NestJS, FastAPI, Node/Express, REST APIs, SQL (MySQL, PostgreSQL, SQL Server), Git.
Also used in production: Next.js, Vue 3, Angular, Prisma, Supabase, AWS, Vercel, APISIX / API gateways, SOAP integrations, n8n, HTML/CSS/Tailwind, Linux.

AWARDS & RECOGNITION

1st Place — Interledger Hackathon 2026
Ledger One
First place with Ledger One, a team project around open payments / Interledger.

Best Project Using ShadAI · 4th Overall 2025
BarranquillA 2025 · EduNova
Award for best project using ShadAI (USA technology) and 4th place overall. Education platform currently under product rebuild.

LANGUAGES

English — EF SET B2 | Spanish — Native

CERTIFICATIONS & COURSES

- **Blockchain Builders 101** — Ruta N / Stellar Development Foundation / BAF (in progress; 5-week bootcamp, MVP on Stellar).
- Certificate of Participation — "Build with AI", Google Developers Group Barranquilla · 2025.
- React Query — DevTalles · 12/2023; HTML5 & CSS3 — Udemy · 07/2018.
